

Caring for your ClearShield-Protected Shower Glass

For best results and to maximize the performance of your ClearShield-protected Shower Glass, rinse with water and squeegee dry after each use. Then clean your shower glass every 2-3 weeks with *AfterCare for Shower Glass*. AfterCare offers optimum-cleaning benefits, maximizes the long life protection of ClearShield, includes an anti-bacterial formula and leaves a clean, fresh scent. AfterCare is also safe to use on all shower framework and hardware.

In hard water areas, it is recommended that *AfterCare for Shower Glass* be used weekly or as required. Also use of our *Limescale Remover* is recommended for more stubborn spots.

DO NOT USE any abrasive scouring powders or pads, highly acidic / alkaline cleaners or sharp instruments to clean your ClearShield Shower Glass. These can permanently damage the glass.

Glass Cleaners like Windex and Glass Plus, will not harm ClearShield Glass, although they are unnecessarily strong. Never use commercial strength cleaners or products such as Lime Away or CLR on ClearShield Glass.

In addition to AfterCare, an effective and inexpensive glass cleaner that will not harm ClearShield Glass is a simple mixture of 80% water and 20% vinegar. Place mixture in a spray bottle, apply to glass and wipe clean.
